

Our frost proofing heating cables have been specially designed for protecting piping against low temperatures and the risk of freezing. When properly installed, the heating cables will only switch on when the **air** temperature drops to +5°C.

Thermogroupuk

SUSTAINABLE HEATING SOLUTIONS

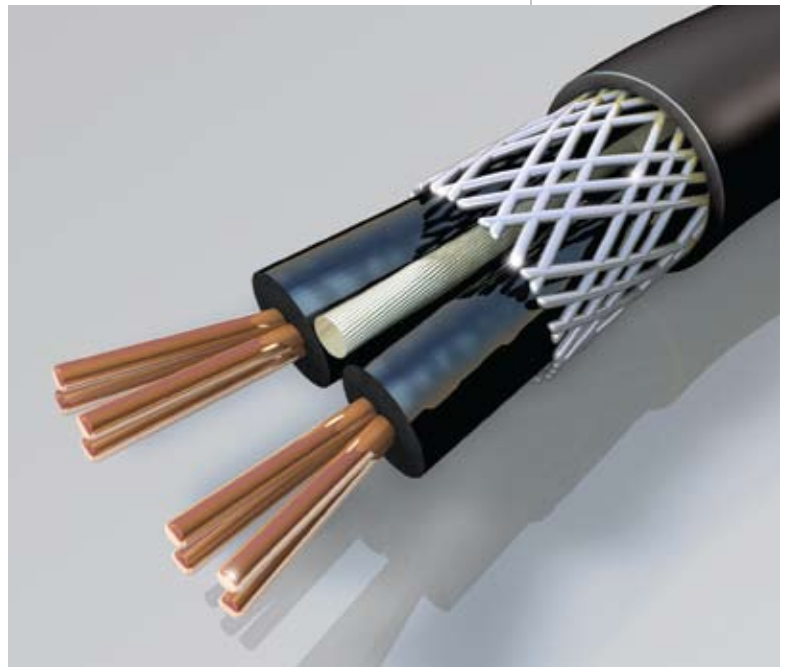

Thermoprotect from **Thermogroup UK** are simple pre-terminated heating cables that can be wrapped around exterior or vulnerable liquid carrying pipes to prevent them freezing up in the winter. They come complete with an integral thermostat and are available in various lengths. Using very low amounts of energy and only operating at temperatures below 5°C Thermoprotect is the ideal way to prevent those costly pipe bursts very economically.

Advantages at a glance

- 230V AC
- DOUBLE INSULATION
- POWER RATING 15W/LM
- INTEGRAL THERMOSTAT
- COMPLETE KIT INCLUDING FITTING ACCESSORIES
- 3 YEAR GUARANTEE

Thermoprotect			
STOCK NO	DESCRIPTION	SIZE	UNIT
5500	Thermoprotect cable kit	4m	ea
5501	Thermoprotect cable kit	8m	ea
5500	Cable ties (12 pk)	150mm	ea

Application

Thermoprotect heating cables have been specially designed for protecting metal piping against low temperatures and the risk of freezing. When properly installed, the heating cables will only switch on when the temperature drops to +5°C.

Additional applications include trace heating for use in gutters and around gulleys to prevent freezing. For example gutter runs above public entrances can be heated to prevent snow build up and resultant snow falls.
